Introduction

Risk Management has become a common trait between successful institutions, as it limits the damage of all identified risks, allowing for additional success and continuity to the institution. Najran University, College of Nursing understands the significance of Risk Management and overall emergency preparedness. Having a Risk Management plan is an important requirement to ensure the safety and wellbeing of everyone affiliated with College of Nursing, and for successful execution and delivery of College of Nursing Strategic Goals.

The purpose of this manual is to provide an overview of the Risk Management processes within the College of Nursing and give practical guidance for the risk management within the college. It includes a process of identifying and assessing risks and developing strategies to manage risks, if any. In addition, it connects the university governance structure and the management structure so that the two work together to provide a combined commitment, set of expectations, organizational and personal accountabilities and responsibilities.

Glossary

Term	Definition
Risk	Affect the uncertainty on objectives.
Risk Management	Coordinated activities to direct and control an organization with regard to risk.
Risk Management Framework	Set of components that provide the foundations and organizational arrangements for designing implementing, monitoring, reviewing, and continually improving risk management throughout an organization.
Risk Management Plan	Scheme within the risk management framework specifying the approach, the management components, and the resources to Be applied to the management of risk.
Risk Matrix Risk	Tool for ranking and displaying risks by defining ranges for consequence and likelihood.
Register Risk	Record of information about identified risks.
Stakeholder	Person or organization that can affect, be effected, or perceive themselves to be effected by a decision or activity.
Risk Description	Structured statement of risk usually containing four elements: sources, events, causes and consequences.
Risk Impact	The outcome of an event affecting objectives.
Risk Likelihood	Probability of something happening.
Risk Treatment	Process to modify or mitigate risks.
Risk Control	An action taken to manage risk.
Target Risk	Risk remaining after risk treatment.

What is the risk?

The risk can be defined as: *Affect the uncertainty on objectives.*

A risk is evaluated using a combination of the likelihood (probability) of a perceived threat or opportunity and the magnitude of impact that this perceived threat or opportunity would have upon the objectives. The product value of (likelihood x Impact) give the gross risk, which allows for easy comparison between risks.

An opportunity can be defined as: *An uncertain event that could have a positive impact upon objectives*

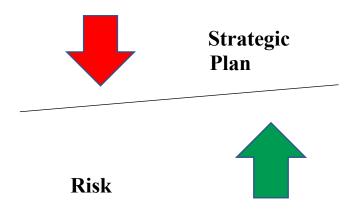

A threat can be defined as: *An uncertain event that could have a negative impact upon objectives*

It is important to note that these definitions highlight the importance of linking risks with the objectives of a department or team, and these provide an essential starting point to understanding and defining the risk being faced.

College of Nursing Strategic Plan with Risk Management

Our goal is to Be Risk free environment through ensuring the effective execution College of Nursing Strategic Plan

The strategic planning cycles provide an opportunity for all areas and staff of College of Nursing to undertake analysis regarding emerging or known risks that may impact on their strategic goals.

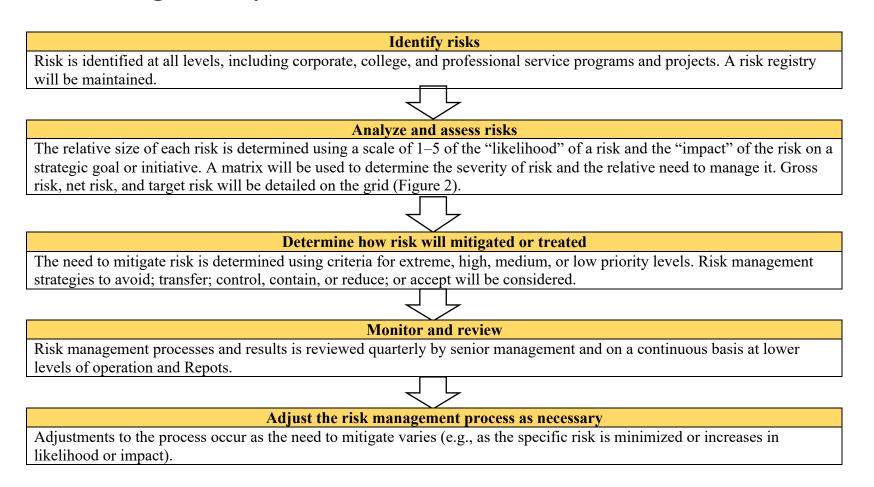

Risk Management Framework

The purpose of the Risk Management Framework is to:-

- Create and protect value by integrating risk management in the College of Nursing strategic planning.
- Set the risk management system within the College of Nursing is part of decision making process.
- Explicitly address uncertainty by taking into consideration the nature of uncertainty in the risk management. That this uncertainty is based on the best available information.
- Provide a systematic, structured and timely approach to the risk management by setting out a consistent way for controlling risks and describing the process for escalating and reporting risks.
- Ensure the College of Nursing meets its risk reporting obligations.
- Risk Management Framework will be detailed on the grid (Figure 1).

Risk Management cycle

Risk Management Framework

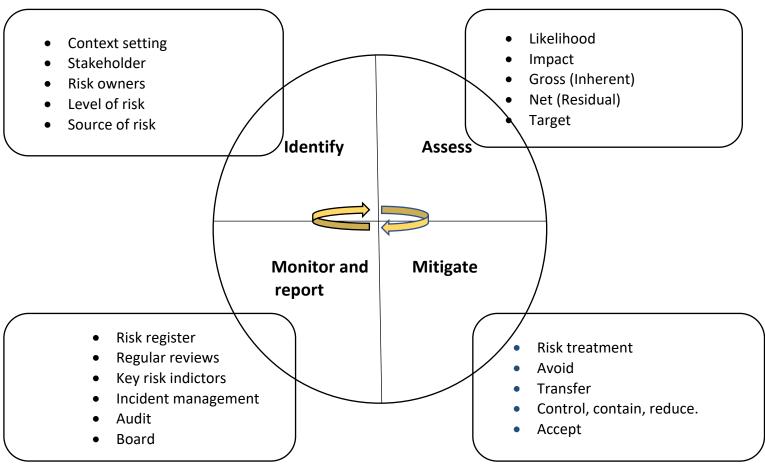

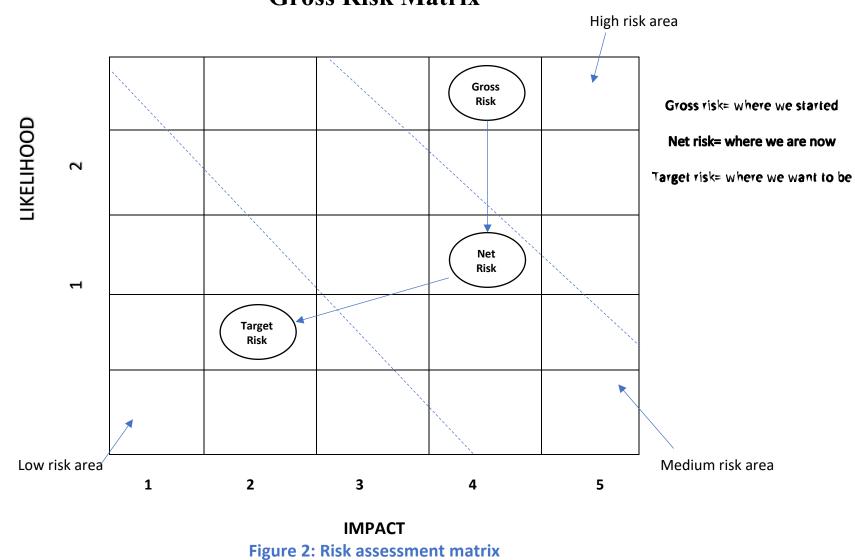

Figure 1: Risk Management Framework

Gross Risk Matrix

Risk Monitoring and Controlling

Continuous monitoring by the risk stakeholders is essential to ensures that the new and changing risks are detected and managed and then the risk response actions are implemented and effective. This continuous monitoring and control keeps track of the identified risks, residual risks, and new risks. It also monitors the execution of planned initiatives for the identified risks and evaluates their effectiveness. During project execution, risk meetings should be held regularly to update the status of risks in the risk register and adding new risks if needed. This is not necessary for minor level projects and may only be needed annually for moderate level projects. The benefits of periodic project risk reviews would be repeating the process of identification, analysis, and response planning. For an unanticipated risk emerges, or a risk's impact that is greater than expected, or the planned response is not adequate. The risk stakeholder should perform additional responses to control such risk.

Risk Categories

Risk Management Plan

Risk can be classified into one of the categories below which can help ensure that any common, significant risks can be escalated and reported in an appropriate manner.

The following are the risk categories :

Risk Treatments

The Level and type of treatment needed for each risk will vary depending on the level of gross risk that has been determined, and also depending on the department for bearing the specific risk.

There are four different types of treatment for any risks:

Action	Description
Avoid	Avoid the risk by deciding not to proceed or continue with the activity that gives rise to the risk.
Transfer	Transfer the risk by engaging other parties to bear or share partial or full consequence of the risk. This may be done through insurance, contracts, partnerships or joint ventures.
Control	Apply further treatment/s to reduce the likelihood or the impact to enhance beneficial outcomes and reduce negative outcomes.
Accept	Taking or increasing the risk in order to pursue an opportunity.

Risk Evaluation

Risk evaluation is used to make decisions about the significance of risks to the college of nursing and whether each specific risk should be accepted or treated.

Likelihood	Impact	Gross risk (Likelihood x Impact)
1. Extremely low – unlikely	1. Insignificant	1 – 5 Very low
Less than 5% chance of occurring	Consequences are very low, minor disruption.	Manage within existing controls Monitor annually.
2. Low – unlikely	2. Minor	6 – 10 Low
<i>5% - 25% chance of occurring</i>	Losses may disrupt the services for a short period. Disruption to a single area of the business.	Manage within existing controls. Monitor half yearly.
3. Medium – possible	3. Moderate	11 – 15 Medium
25%-60% chance of occurring	Service lost for period 1-5days. Internal event review required. Moderate injury equivalent to staff requiring time < 5 days away from work. Adverse media coverage for 1 day.	Evaluate efficiency of existing controls. Develop and implement additional contro mechanisms. Monitor quarterly.
4. High – likely	4. Serious	16 – 20 High
60% -80% chance of occurring	Service lost for exceeding 1 week.	Implement mitigation plan.

Likelihood	Impact	Gross risk (Likelihood x Impact)
	Adverse media coverage for 1week. Internal investigation or by an external source/ regulator. Staff contractor or visitor suffers serious injury. Impact to multiple and diverse areas of the business. Significant senior management intervention required including external assistance.	Escalate/Report to senior management Monitor monthly.
5. Very high – almost certain	5. Very serious	Over 20 - Very high
80%-100% chance of occurring	Significant resources required to recover from impact. Legal consequences resulting in prosecution. Staff, contractor or visitor involved in a fatal event. Adverse media coverage for an extended period. Complete loss of service delivery affecting all institutional critical functions. Immediate University Council intervention required.	Implement mitigation immediately Escalate to senior management Monitor weekly.

College of Nursing Risk Registry:

Risk registers capture the process to establish the context, identify, analyze, evaluate, treat, monitor, and communicate risks to support attainment of the college of nursing strategic plan.

Risk Category: Academic Risk which refers to risks related to the teaching and learning process.
