Introduction

Research activity is an important component of any academic improvement plan, it constitutes one of the pillars of both the faculty mission and the Nursing program mission. As the nursing college has an approved strategic plan with clear goals and objectives, the assigned team under the guidance of the research activity coordinator has to put these goals and objectives into specific executive activities. Each faculty member is responsible for certain activity in the plan and both staff assistance and students are involved. This plan aims to integrate the research and scientific activities into the process of learning.

The applied methodology

- Appointment the responsible team.
- Reviewing the vision, mission and strategic objectives of the nursing college and program.
- Access to the minutes of the brainstorming session regarding scientific research directions of different departments of the nursing program
- Develop a draft of the executive plan of research activities.
- Give feedback to faculty and staff members take their recommendations and suggestions.
- Design the final plan and submit it for approval from the College Council.

Nursing college vision and mission:

Vision:

Pioneering in Nursing Education, Excellence in societal contributions and research production to build an innovative, knowledgeable and internationally competitive society

Mission:

To provide a unique and supportive learning environment for students to develop their knowledge and skills in nursing through advanced academic programs competitive scientific research, and the promotion of social responsibility.

Nursing program mission:

To provide the community with qualified nursing specialists to practice professional skills based on scientific evidence and keep updated with the developments in the health field through a developed educational curriculum, enhancing research skills and social responsibility

Nursing program goals:

1. To provide the students with the knowledge, skills, and values that qualify them to practice the nursing profession.
- 2-To develop the academic staff skills to ensure that they keep pace with the latest developments
3. To update information sources and continuous improvement of laboratories to support research skills, self-learning skills and continuous learning
4. To conduct competitive scientific research to develop teaching strategies, improve nursing practices, and raise health awareness.
- 5-To Enhance social responsibility and belonging among students by involving them in providing effective community services

Nursing college goals and strategic objectives regarding the research activities:

Goal:

Developing and improving scientific research at the College of Nursing

Strategic objective:

Preparing high-quality scientific research, both quantitatively and qualitatively, that contributes to raising health awareness.
